Dr. Balazs Aczel
ELTE University, Budapest

DEVELOPING TOOLS AND PRACTICES TO PROMOTE OPEN AND EFFICIENT SCIENCE

In this talk, Dr. Aczel will introduce some new tools that aim to improve the efficiency of researchers' work and the accumulation of knowledge. HE'll argue that minimizing extra workload and increasing the ease of use have key importance in the introduction of new research practices. The tools that he'll share are: (1) The Transparency Checklist, a consensus-based general ShinyApp checklist to improve and document the transparency of research reports; (2) Tenzing, a solution to simplify the CRediT-based documentation and reporting the contributions to scholarly articles; (3) SampleSizePlanner, an app and R package that offer nine different procedures to determine and justify the sample size of a study design; and (4) the Multi-analyst guidance, a consensus-based guide for conducting and documenting multi-analyst studies.
